

# **BSc (Hons) Artificial Intelligence and Data Science**

**Module: CM1603 Database Systems**

**Individual Coursework Report**

**Module Leader: Ms. Dileeka Alwis**

RGU Student ID : 2330912

IIT Student ID : 20230437

Student Name : Kasthuri Arachchi Gihanga Sandothmi

## Acknowledgment

I would like to express my profound gratitude to Mrs. Dileeka Alwis for her tremendous collaboration and support in making my project yield such a noteworthy outcome. The result of the assignment receives just half credit. Finally, but just as importantly, I would want to thank my friends and supporters, without whom the work could not have been completed effectively and on time.

## Task 1 ( Database Report )

### Section 1: Extended Entity Relationship Diagram

#### Entities

- Item
- Supplier
- Order
- Customer
- Payment
- Book (Sub Entity)
- Stationary (Sub Entity)
- Company (Sub Entity)
- Individual (Sub Entity)
- BankTransfer (Sub Entity)
- OnlinePayment (Sub Entity)

#### Superclass and Subclasses

Superclass	Subclasses
• Item	Book, Stationary
• Supplier	Company, Individual
• Payment	BankTransfer, OnlinePayment

#### Primary Key

- Item – ItemCode
- Supplier – SupplierID
- Order – OrderID
- Customer – CustomerID
- Payment – PaymentID

#### Non-Key Attributes

- Item – Price, StockLevel, ReorderLevel
- Supplier – Name
- Order – OrderDate, DeliveryDate, DeliveryAddress, Quantity
- Customer – Name, Email, Address
- Payment – Amount, Date
- Book – ISBN, Title, Genre, Category, Author, Publisher, YearOfPublication
- Stationary – Type, Brand
- Company – ContactPerson
- Individual – NIC
- BankTransfer – BankName, AccountNumber
- OnlinePayment – PaymentMethod

## Relationships Between Entities

### Binary Relationships:

- Supplier and Item
  - Supplier *supplies* Item.
- Customer and Payment
  - Customer *makes* Payment.

### Ternary Relationships:

- Item, Customer, and Order
  - Customer *places* the Order for the Item.
- Customer, Order, and Payment
  - Customer *confirms* the order with a Payment.

## Multiplicity Constraints

### Binary Relationships:

- One Item may be supplied by many Suppliers while One Supplier supplies many Items.  
( m : n )
- One Payment can be made by only one Customer while one Customer makes many Payments.  
( 1 : m )

### Ternary Relationships:

- One Item can be placed by many Customers while one Customer can place many items. ( m : n )
- One Order can be placed by only one Customer while one Customer can place many Orders.  
( 1 : m )
- One Item can be placed to many Orders while one Order can be placed for many Items.  
( 1 : m )
- One Payment can be made by only one Customer while one Customer can make many Payments. ( 1 : m )
- One Order can be confirmed by only one Payment while one Payment can confirm many Orders. ( 1 : m )

## Assumptions

- customer, payment
  - One customer can make one or many payments while one payment can be only done by one customer.
- supplier, item
  - One supplier can supply one or many items while one item can be supplied by one or many suppliers.
- order, item, customer
  - A customer places an order for items.
- order, customer, payment
  - A customer confirms the order with a payment.

- Extended Entity Relationship Diagram (EERD)

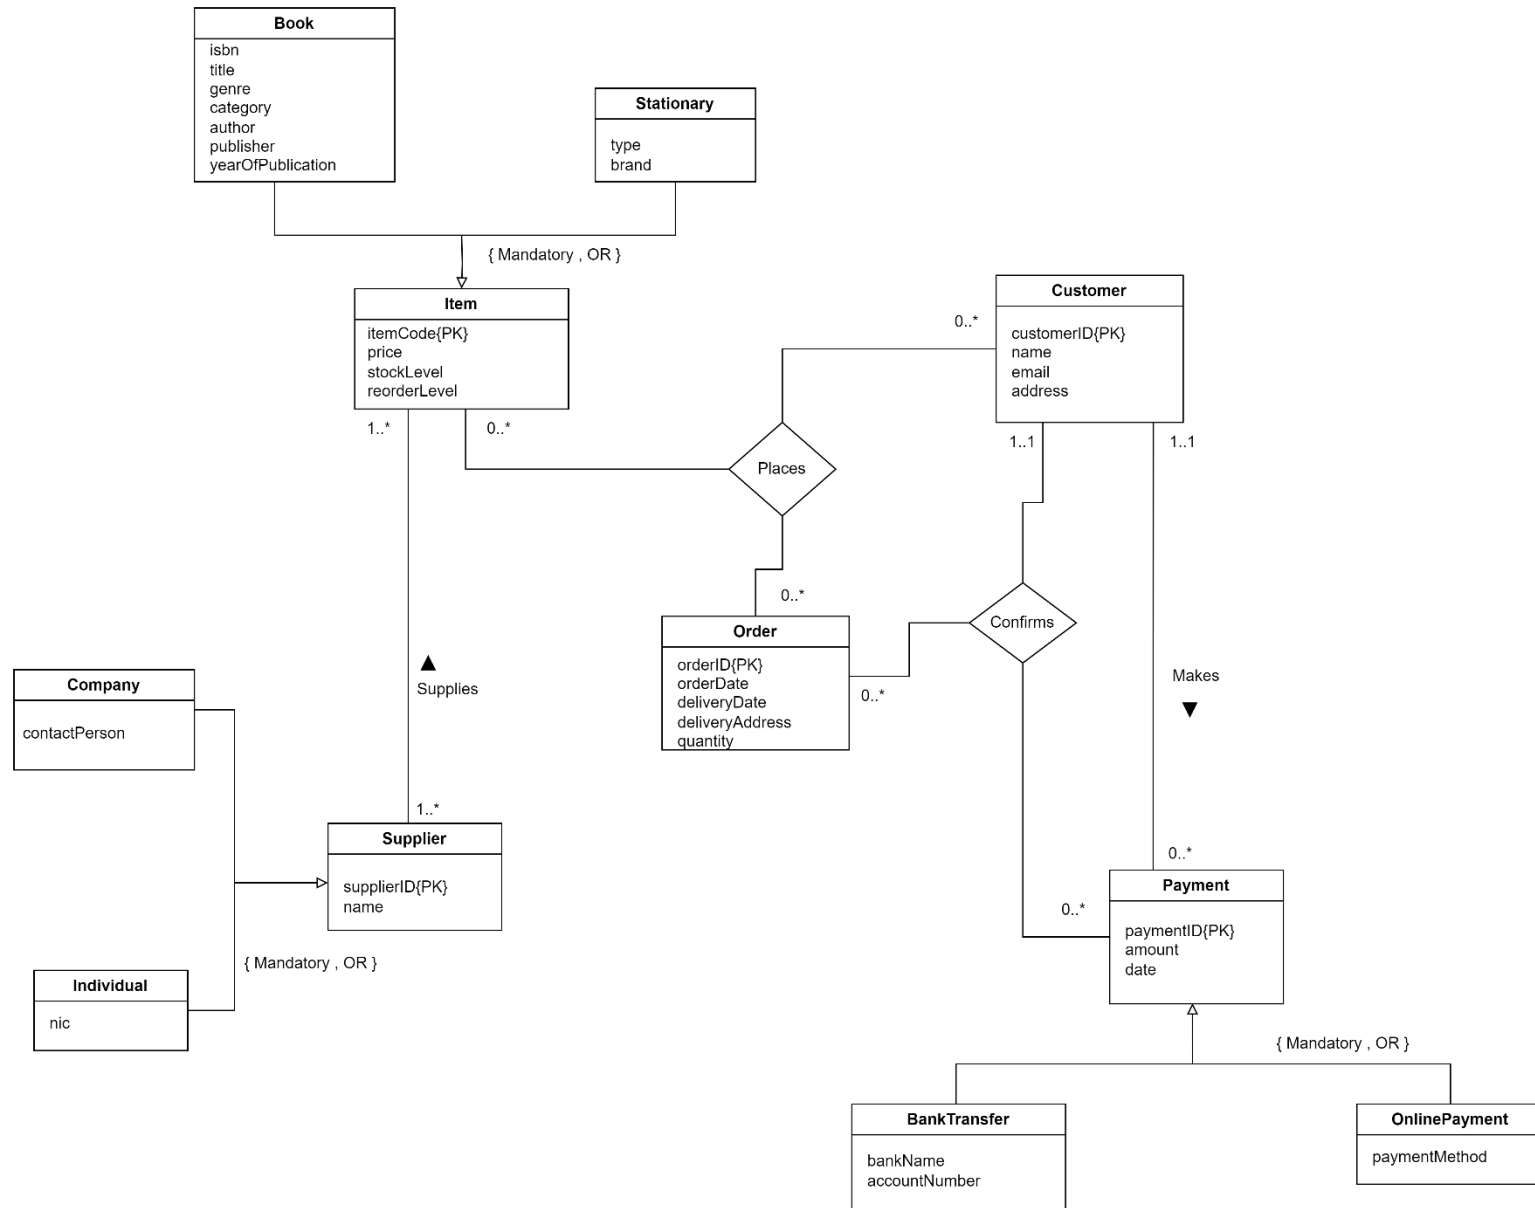

Figure 01 EERD

## Section 2: Relational Schema Diagram

### Primary Key

- Order – OrderID
- Customer – CustomerID
- CompanySupplier – SupplierID
- IndividualSupplier – SupplierID
- BankTransPayment – PaymentID
- OnlinePayPayment – PaymentID
- BookItem – ItemCode
- StationaryItem – ItemCode
- BookPlacement – (ItemCode, CustomerID, OrderID)
- StationaryPlacement – (ItemCode, CustomerID, OrderID)
- BankConfirmation – (PaymentID, CustomerID, OrderID)
- OnlineConfirmation – (PaymentID, CustomerID, OrderID)
- Book\_Company – (ItemCode, SupplierID)
- Book\_Individual – (ItemCode, SupplierID)
- Stationary\_Company – (ItemCode, SupplierID)
- Stationary\_Individual – (ItemCode, SupplierID)

### Foreign Keys

- BankTransPayment – CustomerID
- OnlinePayPayment – CustomerID
- Book\_Company – ItemCode, SupplierID
- Book\_Individual – ItemCode, SupplierID
- Stationary\_Company – ItemCode, SupplierID
- Stationary\_Individual – ItemCode, SupplierID
- StationaryPlacement – ItemID, CustomerID, OrderID
- BookPlacement – ItemID, CustomerID, OrderID
- BankConfirmation - PaymentID, CustomerID, OrderID
- OnlineConfirmation - PaymentID, CustomerID, OrderID

### Non-Key Attributes

- Order – OrderDate, DeliveryDate, DeliveryAddress, Quantity
- Customer – Name, Email, Address
- CompanySupplier – Name, ContactPerson
- IndividualSupplier – Name, NIC
- BankTransPayment – Amount, Date, BankName, AccountNumber
- OnlinePayPayment – Amount, Date, PaymentMethod
- BookItem – Price, StockLevel, ReorderLevel, ISBN, Title, Genre, Category, Author, Publisher, YearOfPublication
- StationaryItem – Price, StockLevel, ReorderLevel, Type, Brand

## Relations Between Entities

- Book\_Company is for BookItem.
- Book\_Company is for CompanySupplier.
- Book\_Individual is for BookItem.
- Book\_Individual is for IndividualSupplier.
- Stationary\_Individual is for StationaryItem.
- Stationary\_Individual is for IndividualSupplier.
- Stationary\_Company is for StationaryItem.
- Stationary\_Company is for CompanySupplier.
- BookItem is placed for a BookPlacement.
- Customer places the BookPlacement.
- Order is placed for BookPlacement.
- StationaryItem is placed for the StationaryPlacement.
- Customer places the StationaryPlacement.
- Order is placed for the StationaryPlacement.
- Order is confirmed with the BankConfirmation.
- Customer confirms with the BankConfirmation.
- BankTransPayment is confirmed the BankConfirmation.
- Order is confirmed with the OnlineConfirmation.
- Customer confirms with the OnlineConfirmation.
- OnlinePayPayment is confirmed the OnlineConfirmation.
- Customer makes BankTransPayment.
- Customer makes OnlinePayPayment.

## Assumptions

- Due to {Mandatory, OR} under the Supplier table, the Supplier table was removed and two new tables which is called as 'CompanySupplier' and 'IndividualSupplier' was created. The primary key ( supplierID) and other non-key attributes which were in the Supplier table before, added to the newly created two tables.
- Due to {Mandatory, OR} under Item table, the Item table was removed and two new tables which is called as 'BookItem' and 'StationaryItem' was created. The primary key (itemCode) and other non-key attributes which were in the Item table before, added to the newly created two tables.
- Due to { Mandatory, OR} under Payment table, the Payment table was removed and two new tables which is called as 'BankTransPayment' and 'OnlinePayPayment' was created. The primary key (paymentID) and other non-key attributes which were in the Payment table before, added to the newly created two tables.
- Two process tables were created because of mapping the ternary relations.
  - StationaryPlacement table is for the ternary relationship between StationaryItem, Order, and Customer tables and BookPlacement table is for the ternary relationship between BookItem, Customer and Order tables.
  - BankConfirmation table is for the ternary relationship between Order, BankTransPayment, and Customer tables and OnlineConfirmation Is for the ternary relationship between OnlinePayPayment, Order, and Customer tables.
- Because of the many to many relationship between (BookItem and CompanySupplier), (BookItem and IndividualSupplier), (StationaryItem and CompanySupplier), and (StationaryItem and IndividualSupplier) headed to create four process tables.

- Relational Schema Diagram

10 );
```

Figure 49 code for OnlineConfirmation table

The screenshot shows a database management interface with the 'Table structure' tab selected for the 'onlineconfirmation' table. The table has three columns: 'paymentID', 'customerID', and 'orderID', all of type 'int(15)'. The 'paymentID' column is the primary key. There are foreign key constraints: 'onl\_pay\_fk9' linking 'paymentID' to 'OnlinePayPayment', 'cust\_fk9' linking 'customerID' to 'Customer', and 'ord\_fk9' linking 'orderID' to 'Order'.

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action

6 (12010, 2023845, 16910),
7 (12015, 2023648, 16933);
```

Figure 51 insert data into OnlineConfirmation table

The screenshot shows a table view of the 'onlineconfirmation' table with five rows of data. Each row has columns for 'paymentID', 'customerID', and 'orderID'. The data is as follows:

	paymentID	customerID	orderID
<input type="checkbox"/> Edit Copy Delete	11034	2023023	16698
<input type="checkbox"/> Edit Copy Delete	12004	2021001	16950
<input type="checkbox"/> Edit Copy Delete	12008	2023145	16755
<input type="checkbox"/> Edit Copy Delete	12010	2023845	16910
<input type="checkbox"/> Edit Copy Delete	12015	2023648	16933

Figure 52 data entered OnlineConfirmation table

## Book\_Company Table

```
1 CREATE TABLE Book_Company
2 (
3     itemCode INT(15),
4     supplierID INT(15),
5     CONSTRAINT book_company_pk PRIMARY KEY (itemCode, supplierID),
6     CONSTRAINT book_code1 FOREIGN KEY (itemCode) REFERENCES BookItem (itemCode),
7     CONSTRAINT comp_ID1 FOREIGN KEY (supplierID) REFERENCES CompanySupplier (supplierID)
8 );
```

Figure 53 code for Book\_Company table

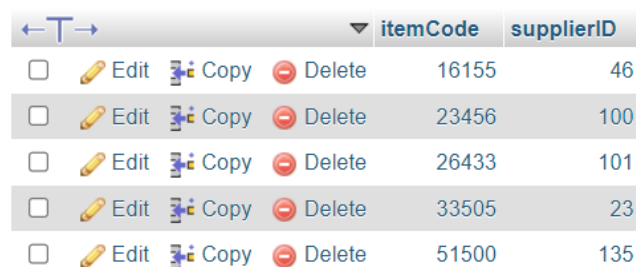

The screenshot shows the MySQL Workbench interface with the 'Table structure' tab selected for the 'book\_company' table. The table has two columns: 'itemCode' (INT(15)) and 'supplierID' (INT(15)). Both columns are part of a primary key and have foreign key constraints. The 'itemCode' column references the 'BookItem' table, and the 'supplierID' column references the 'CompanySupplier' table. The interface also shows various actions like 'Change', 'Drop', and 'More' for each column.

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
1	itemCode	int(15)			No	None			Change Drop More
2	supplierID	int(15)			No	None			Change Drop More

Figure 54 Book\_Company table

```
1 INSERT INTO Book_Company (itemCode, supplierId)
2 VALUES
3 (51500, 135),
4 (26433, 101),
5 (23456, 100),
6 (33505, 23),
7 (16155, 46);
```

Figure 55 insert data into Book\_Company table

The screenshot shows the MySQL Workbench interface with the 'Table structure' tab selected for the 'book\_company' table. The table has two columns: 'itemCode' and 'supplierID'. The data entered into the table is shown in the following table:

	itemCode	supplierID
<input type="checkbox"/> Edit Copy Delete	16155	46
<input type="checkbox"/> Edit Copy Delete	23456	100
<input type="checkbox"/> Edit Copy Delete	26433	101
